

Electric Row Crop Tractor by ScoringAg

New dual electric or solar powered Row Crop Tractor is an electronic marvel and handles more than one job and built to be used on sustainable farms.

The environmentally friendly 4 Wheel drive row crop Electric Tractor featured by ScoringAg is the answer for many issues the crop farmer is facing now. The affordable row crop Tractor for all farms can change width depending on the crop whether in beds or rows and has 3pt hitches front and rear with pto.

This new electric or solar powered Tractor has zero pollution and requires no oil changes, or fuel, no warm-up time with plenty of power and a set of lights and reflectors for working early morning or late evenings or spraying at night.

Driven by 4,55hp electric wheel motors, these tractors are work horses. A brilliant addition to the electric tractor is the on-board, three-bank smart charger that helps prolong battery life. There is even an option for solar charging the batteries! For about a dime's worth of local electricity, just plug it in and be fully charged in about eight to ten hours or fast charge in 2 hrs. The batteries weight is balanced on the row crop tractor frame for maximum traction in rough soils and a optional extra battery can be carried on the 3 pt. Hitch.

This new Tractor enables any produce, crop and large farm operator to transport rapidly any load on wheels with no physical effort. They can come with tracks if needed for extreme conditions.

Available attachments for farming needs, soil preparation, planting, cultivating, plant spraying, harvesting as well as light or heavy towing covers some of the many chores of a farm or community operation.

An attached full feature cab will make the job easier too. These Electric row crop Tractors are built for the USA for ScoringAg to address the daily needs in the farm and sustainable agriculture industry that maybe off the grid or in areas where normal services are non-existent.
