

Mobile Steam Delivery Platform Engineered by ScoringAg, Inc

PRZOOM - /newswire/ - Venice, FL, United States, 2014/10/15 –

The highly mobile steam machine is self contained and can be operated 24/7 to provide low or high pressure dry or wet steam for pathogen control and sanitation operations for cleaning and decontamination of equipment - ScoringAg-Equipment.com.

The steaming unit is built to operate so it can be hydraulic leveled and can carry steam attachments.

The mobile steam platform can be used in many ways to perform sanitation and mitigation operations to control the spread of diseases and infections thru cleaning and decontamination of both large and small equipment.

One attachment is the TreeSteamer unit invented by ScoringAg.com for citrus greening and other tree diseases. The TreeSteamer can handle different size steam tunnels for continuous flow or batch operations. It has the ability to lift the steam tunnel off a line of tree's while in motion. The steam tunnel can be detached in a couple of minutes and the TreeSteamer reloaded with a different size tunnel up to 40 feet long and 20 feet wide for larger tree's or smaller bushes.

The mobile steam platform with tunnel can also be used to sanitize large volumes of human and livestock equipment, pallets, bins, crates, contaminated furniture, plants and their containers whether wood, plastic, or metal at any handling site. The unit can handle livestock trailers and shipping containers. The steam tunnel unit can be used for transport and support equipment sanitation in cases where livestock diseases such as foot and mouth, PEDv, Africa Swine fever, swine flu or human disease like Ebola, or a Plague if present.

The mobile steam platform can also heat and treat soils with an attachment that stirs the soil in beds with live steam on the go. The steaming of soils removes weed seeds, soil diseases, and nematodes providing a clean bed for planting and growing of plants and makes farming easy. The steaming of soils will enhance soil sterilization to stop severe plant diseases while increasing yields.

The mobile steam platform can also add another attachment for weed control under trees in orchards and groves to cut the use of chemicals in foods. The steam arm is hydraulic pressure decisive and can move around

tree trunks, bushes and grape vines while on the move. It can also be used with a steam lance for single spot work in tight areas.

Yes, the Mobile Steam Platform from ScoringAg has many advantages for securing a safe and productive environment no-matter the application and purpose of sanitation. In practice steam kills all phytopathogenic organisms and hot steam kills the majority of diseases and releases abundant soil nutrients, in particular nitrate, which is made available for plants in soluble forms through condensation in the soil. Steam in the form of heat can kill many pathogens on trees and process equipment. All that's needed is a Steamer, with the right attachment, add potable water, then heat to the steam level with diesel fuel and apply to solve those tough pathogenic problems. ScoringAg-Equipment.com supplies sanitation equipment for the food and its support industries for human and animal environments.
