

Shipping Containers, the new building solution for Small Farmers, Processors or Ag Groups

The use of shipping containers converted to a building has grown in popularity for all different kind of uses from homes to office buildings.

ScoringAg, Inc. developed a multitude of different Modular Container Units© especially for the agriculture and aquaculture world to confirm with 3 main concerns:

1. cost-effective
2. safe
3. mobile

Containers used as buildings are 7 times cheaper than a conventional structure and lower in insurance cost. A good solution for start-up agriculture businesses or enterprise expansions.

Their inherent strength makes them crush and fire resistant, termite, hurricane, earthquake and theft proof. Food processing is done in an enclosed and controlled sanitary environment.

The containers are standardized and can be easily transported by truck, railroad or ship. They can be used for manufacturing, processing, cooling or food storage and can be pre-wired for any type of electrical and plumbing needs. When the business site is no longer needed or fails, the container can always be picked up, reconditioned and resold.

Ask for the complete list of ScoringAg's MCF's© for harvesting or processing of any of these industries: Aquatic, Animals & Poultry, Dairy Products & Eggs, Fruit & Vegetables, Nuts, Grains, Beans & Rice, Oil, Honey & Syrup, Feed & Fertilizer, Services & Custom Work
